

# MKPR-1025 Pulsar/Receiver System

MKPR-1025 is a superb ultrasound pulser/receiver system that covers wide voltage range and generates clean RF waveform. MKPR-1025 can be used as a stand alone pulser/receiver system while it can be also used for analytical purpose or factory automation application with its optional DSP unit.

## Features

- Generates superb waveform over the wide range of frequency.
- Wide range of gain control.
- Optional DSP unit transfers waveforms to computer.
- Collected waveforms are analyzed through the provided software.
- Sturdy aluminum housing.
